

Features:

- Compliant with SFP MSA standard
- 3.3V DC power supply
- 1310nm FP, 155Mbps, 20Km
- Difference LVPECL inputs and outputs
- Duplex LC connector
- Compliant with SFF-8472
- Hot Pluggable
- ROHS compliant

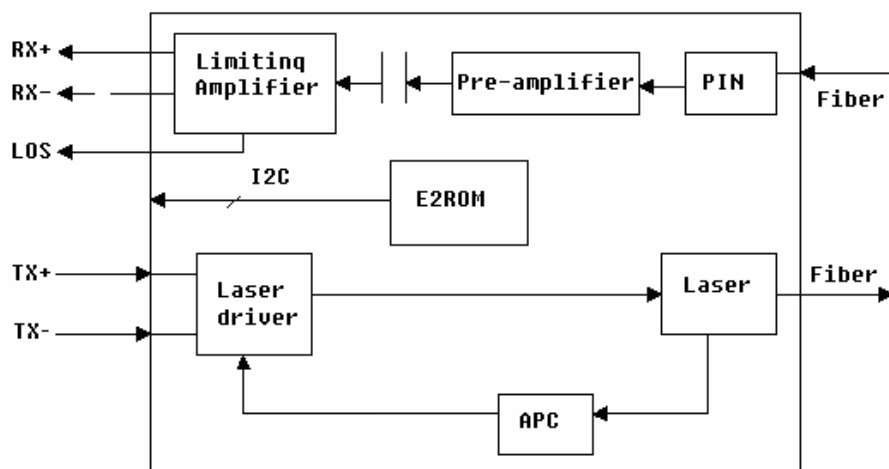

Application:

- Fast Ethernet data link
- Data storage networks
- Other optical links
- Optical access network

Description

Honlus 155Mbps single-mode SFP is a high performance and cost effective transceiver. It is designed to meet Fast Ethernet application. The transceiver consists two sections: the transmitter section consists of a high reliability 1310nm FP laser diode (LD) with monitor photo detector (MPD) in eye safety; the receiver section consists of a high speed InGaAs PIN photodiode (PD) and trans-impedance preamplifier. The output of the PD drives the post-amplification, quantizing, and optical signal detection circuits. The receiver is built in the LOS monitoring function. For further information, please see SFP MSA and SFF-8472 standard.

Block Diagram

PECL Logic Level

Logic State	Unit	Min	Typ	Max
Low	V	VCC-1.84	-	VCC-1.60
High	V	VCC-1.10	-	VCC-0.90

TTL Logic Level

Logic State	Unit	Min	Typ	Max
Low	V	0	-	0.8
High	V	2.4	-	VCC

Transceiver Pin Locations

Pin Descriptions

Pin	Name	Description	Plug Sequence	Note
1	VeeT	Transmitter Ground	1	

2	TX Fault	Transmitter Fault Indication	3	1
3	TX Disable	Transmitter Disable	3	2
4	MOD_DEF2	Module Definition 2	3	3
5	MOD_DEF1	Module Definition 1	3	3
6	MOD_DEF0	Module Definition 0	3	3
7	Rate Select	Not Connected	3	
8	LOS	Loss of Signal	3	4
9	VeeR	Receiver Ground	1	
10	VeeR	Receiver Ground	1	
11	VeeR	Receiver Ground	1	
12	RD-	Inverse Received Data Out	3	5
13	RD+	Received Data Out	3	5
14	VeeR	Receiver Ground	1	
15	VccR	Receiver Power	2	
16	VccT	Transmitter Power	2	
17	VeeT	Transmitter Ground	1	
18	TD+	Transmit Data In	3	6
19	TD-	Inverse Transmit Data In	3	6
20	VeeT	Transmitter Ground	1	

Note:

- 1, TX Fault is an open collector output, which should be pulled up with a 4.7k~10k_resistor on the host board to a voltage between 2.0V and Vcc+0.3V. Logic 0 indicates normal operation; logic 1 indicates a laser fault of some kind. In the low state, the output will be pulled to less than 0.8V.
2. TX Disable is an input that is used to shut down the transmitter optical output. It is pulled up within the module with a 4.7k~10k_ resistor. Its states are:
 Low (0~0.8V): Transmitter on (>0.8V, <2.0V): Undefined
 High (2.0~3.465V): Transmitter Disabled
 Open: Transmitter Disable
3. MOD-DEF 0, 1, 2 are the module definition pins. They should be pulled up with a 4.7k~10k_ resistor on the host board. The pull-up voltage shall be VccT or VccR.
 MOD-DEF 0 is grounded by the module to indicate that the module is present

MOD-DEF 1 is the clock line of two wire serial interface for serial ID

MOD-DEF 2 is the data line of two wire serial interface for serial ID

4. LOS is an open collector output, which should be pulled up with a 4.7k~10k_ resistor on the host board to a voltage between 2.0V and Vcc+0.3V. Logic 0 indicates normal operation; logic 1 indicates loss of signal. In the low state, the output will be pulled to less than 0.8V.
5. These are the differential receiver outputs. They are AC-coupled 100_ differential lines which should be terminated with 100_ (differential) at the user SERDES.
6. These are the differential transmitter inputs. They are AC-coupled, differential lines with 100_ differential termination inside the module.

Absolute Maximum Ratings

Parameter	Symbol	Min	Max	Unit
Storage Temperature	T _S	-40	85	°C
Operation Temperature	T _o	-40	85	°C
Storage Relative Humidity	RH _S	-	95	%

Note 1: Internally AC coupled.

Note 2: Average received power where the BER = 10⁻¹⁰, measured with a 2₂₃-1 NRZ test pattern..

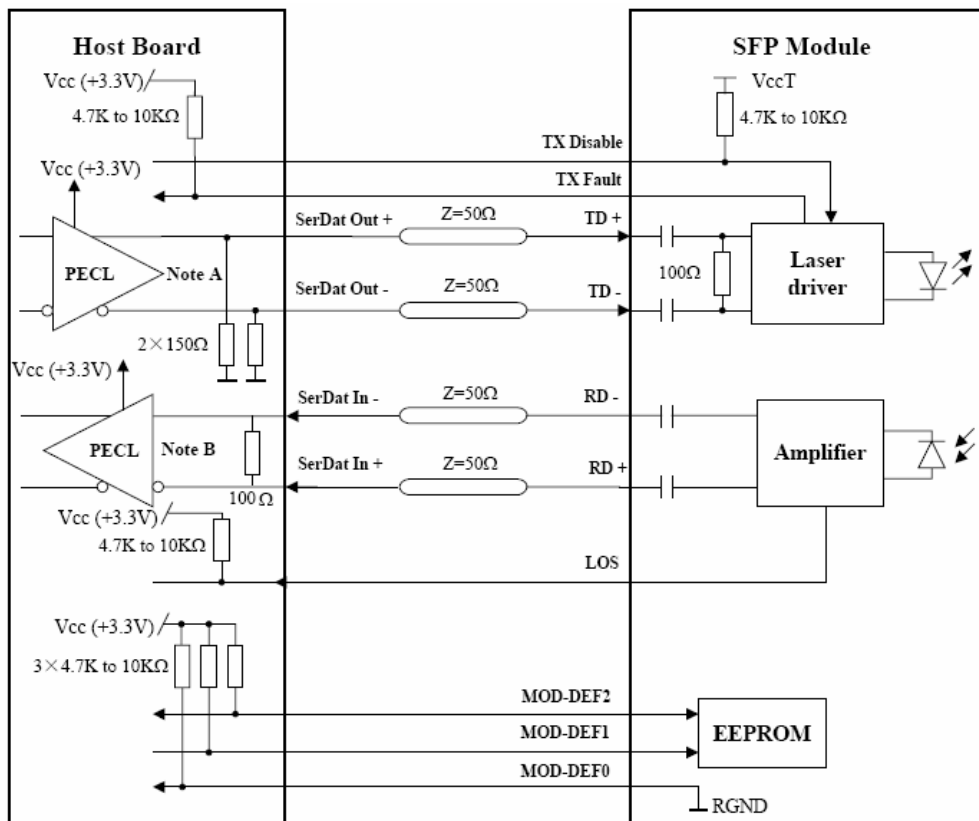

Power Supply

The Transceiver includes internal circuit components to filter power supply noise. Under some conditions of EMI and power supply noise, external power supply filtering may be necessary. If receiver sensitivity is found to be degraded by power supply noise, the filter network illustrated

in the following figure may be used to improve performance. The values of the filter components are general recommendations and may be changed to suit a particular system environment. Shielded inductors are recommended.

Recommended Application Circuits

Recommended Front Panel Layout Opening for LC
